Startup and basic play

ILLUSTRATIVE COMPLETED REPORT | Example outcomes only; these are not verified test results.

TEST 01 - Clean checkout and F5		
Test details	Feature commit: 0b8d822 (26/10/2026) | Test date (example): 27/10/2026	
Setup	Windows x64; Visual Studio C++ tools and VS Code C/C++ extension installed. Internet available for the first build.	
Action	Open the repository root, select Run MazeGame, then press F5. Close and launch again.	
Expected	The build succeeds, raylib is restored automatically, and the main menu opens. The next build reuses the dependency cache.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 02 - Profile and menu navigation		
Test details	Feature commit: 96529ef (26/10/2026) | Test date (example): 28/10/2026	
Setup	Main menu is open.	
Action	Choose Play, create a unique valid player name, select it, then choose Easy.	
Expected	The player can be selected and the Easy maze starts. Menu labels and selections remain readable.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 03 - Movement, camera and walls		
Test details	Feature commit: 015fabd (27/10/2026) | Test date (example): 29/10/2026	
Setup	An Easy run is active.	
Action	Move with WASD and arrow keys; look with the mouse. Walk into a wall and slide around a corner.	
Expected	Movement and camera respond correctly. The player cannot pass through walls or leave the maze.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 04 - Jump and normal gravity		
Test details	Feature commit: 3e00ff2 (01/11/2026) | Test date (example): 02/11/2026	
Setup	An Easy run is active on the floor.	
Action	Jump with Space and the mouse wheel, then land. Press G near a side wall and ceiling.	
Expected	Each fresh jump input can trigger a jump; the player lands safely. G does not change gravity in normal modes.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

Gravity, hazards and run outcomes

ILLUSTRATIVE COMPLETED REPORT | Example outcomes only; these are not verified test results.

TEST 05 - Floor and ceiling gravity only		
Test details	Feature commit: 5444d64 (05/11/2026) | Test date (example): 06/11/2026	
Setup	A Zero Gravity run is active.	
Action	Press G to transfer to the ceiling, then back to the floor. Move alongside both side walls.	
Expected	The player transfers between floor and ceiling. Side walls never redirect gravity or rotate the player onto them.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 06 - Hazards and bypasses		
Test details	Feature commit: b577489 (05/11/2026) | Test date (example): 07/11/2026	
Setup	A Zero Gravity run contains a floor barrier and a ceiling barrier. Use separate runs for lethal checks.	
Action	Bypass a floor barrier on the ceiling and a ceiling barrier on the floor. Then deliberately touch a barrier, including during a transfer.	
Expected	Safe bypasses remain possible. Touching or crossing a hazard ends the run with a failure screen and does not save a winning time.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 07 - Reach the exit		
Test details	Feature commit: ec3c9e8 (27/10/2026) | Test date (example): 30/10/2026	
Setup	An Easy run is active with time remaining.	
Action	Reach the green exit before the timer expires, inspect the results, then choose Retry.	
Expected	A victory screen shows the completed run and elapsed time. Retry starts a fresh playable run.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 08 - Timer expiry		
Test details	Feature commit: 5470ffc (24/10/2026) | Test date (example): 31/10/2026	
Setup	An Easy run is active; do not reach the exit.	
Action	Allow the timer to reach zero, then inspect the end screen.	
Expected	The run ends as a failure rather than a victory. No best time is created or improved by this loss.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

Pause, settings and saved records

ILLUSTRATIVE COMPLETED REPORT | Example outcomes only; these are not verified test results.

TEST 09 - Pause and focus loss		
Test details	Feature commit: a219331 (04/11/2026) | Test date (example): 05/11/2026	
Setup	A run is active. Note the remaining time.	
Action	Press Esc, wait, then resume. Switch to another application and return.	
Expected	Pausing freezes the timer and movement. Losing focus pauses the run safely; returning requires an explicit resume.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 10 - Sensitivity and persistence		
Test details	Feature commit: 14b9f8c (01/11/2026) | Test date (example): 03/11/2026	
Setup	A run is paused.	
Action	Change mouse sensitivity, resume and compare camera movement. Quit normally and reopen the game.	
Expected	Camera response follows the chosen sensitivity. The selected value is restored after relaunch.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 11 - Best-time rules		
Test details	Feature commit: 84102b7 (04/11/2026) | Test date (example): 08/11/2026	
Setup	A player has a completed time for a particular maze size and mode.	
Action	Complete a slower run and a faster run for the same player, size and mode. Compare the stored record after each.	
Expected	The slower run preserves the record. The faster run replaces it. Records for other players, sizes and modes remain separate.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**

TEST 12 - Saved data survives relaunch		
Test details	Feature commit: abbcb60 (07/11/2026) | Test date (example): 10/11/2026	
Setup	A player and a best-time record exist; storage is writable.	
Action	Quit the game, restart it from the same project folder, and select the same player.	
Expected	The player and best time are restored from the local database without a database server.	
Actual result	As expected (example outcome; not observed).	**PASSED (example)**
